Preferences and tradeoffs

IS PARETO THE BEST STANDARD?

Andrew Baker

@Andrew__Baker

Following

Love the fact that some econs are figuring out that pareto efficiency is one of those things overwhelmingly accepted by economists that most of the general population doesn't actually value.

INCENTIVES

WHY DO PEOPLE DO WHAT THEY DO?

People get utility from doing stuff

Extrinsic rewards

Intrinsic rewards

**These can get distorted
and crowded out!**

WHY CARE AS AN MPA?

Good policy uses incentives to channel behavior toward some desired outcome. Bad policy either ignores incentives or fails to anticipate how rational individuals might change their behavior to avoid being penalized.

Naked Economics, p. 39

PERVERSE INCENTIVES

IMPORTANCE OF INCENTIVES

**People respond to
what you signal**

You get what you measure

Daycares and late pickups

Blood donors

Taxes

Favors

Thanksgiving

Playgroups and daycares

MLMs

NED and democracy promotion

Extrinsic rewards can crowd out intrinsic motivations

Don't violate important social relationships by reducing services to a market transaction

Pay enough or don't pay at all

PULLING POLICY LEVERS

TRAGEDY OF THE COMMONS

| | | Farmer 2 | |
|----------|--------------------|--------------------|------------------|
| | | Use water normally | Double water use |
| Farmer 1 | Use water normally | 6, 6 | 2, 8 |
| | Double water use | 8, 2 | 3, 3 |

TRAGEDY OF THE COMMONS

| 50% tax on doubled use | | Farmer 2 | |
|------------------------|--------------------|--------------------|------------------|
| | | Use water normally | Double water use |
| Farmer 1 | Use water normally | 6, 6 | 2, 4 |
| | Double water use | 4, 2 | 1.5, 1.5 |

IS THAT TAX FAIR?

Procedurally?

Substantively?

Rawlsianly?

CHANGES IN TAXES

| | | Firm owner | |
|------------|-------------------|----------------|----------------------------|
| | | Pay normal tax | Hire lawyers for loopholes |
| | | | |
| Government | Moderate tax rate | 100, 500 | 85, 495 |
| | High tax rate | 150, 450 | 90, 490 |

NASHES MATTER

**Government tries to get to
(High taxes, Pay normal rate)**

Firms hire lawyers

New outcome is worse for everyone

Policies must be a Nash equilibrium

ELASTICITY AND RESPONSIVENESS

$$\varepsilon = - \frac{\% \text{ change in demand}}{\% \text{ change in price}} \quad \varepsilon = - \frac{\Delta Q}{\Delta P} \times \frac{P}{Q}$$

% change in demand that follows a 1% change in price

**Q ↑ P ↓
or
Q ↓ P ↑**

$\epsilon = 2$: "If price increases by 10%, quantity decreases by 20%"

$\epsilon = 0.5$: "If price increases by 10%, quantity decreases by 5%"

$\epsilon = \infty$ = Perfectly elastic

Any change in price
moves quantity to 0

Identical goods
Two vending machines

$\epsilon > 1$ = Elastic

Changes in price change
the quantity a lot

Goods with substitutes
Diet Coke

$\epsilon = 1$ = Unit elastic

Changes in price change
the quantity the same

$\epsilon < 1$ = Inelastic

Changes in price change
the quantity a little

Goods with few substitutes
AIDS medicine

$\epsilon = 0$ = Perfectly inelastic

Changes in price do
nothing to the quantity

Survival goods
Water in the desert

€ , TAXES , & PREFERENCES

Taxing things changes their prices

**Changing prices changes
quantities demanded**

Taxing elastic goods will make quantities go down a lot and decrease tax revenues

Taxing inelastic goods will make quantities go down slightly and not hurt revenues

| Category | Type | Calories per serving | Price per 100 g (\$) | Typical spending per week (\$) | Price elasticity of demand |
|----------|-------------------------|-------------------------|-------------------------|--------------------------------------|----------------------------------|
| 1 | Fruit and vegetables | 660 | 0.38 | 2.00 | 1.128 |
| 2 | Fruit and vegetables | 140 | 0.36 | 3.44 | 0.830 |
| 15 | Grain, pasta, bread | 1,540 | 0.38 | 2.96 | 0.854 |
| 17 | Grain, pasta, bread | 960 | 0.53 | 2.64 | 0.292 |
| 28 | Snacks, candy | 433 | 1.13 | 4.88 | 0.270 |
| 29 | Snacks, candy | 1,727 | 0.68 | 7.60 | 0.295 |
| 30 | Milk | 2,052 | 0.09 | 2.32 | 1.1793 |
| 31 | Milk | 874 | 0.15 | 1.44 | 1.972 |

If P↑ by 10%, Q↓...

8.3%

2.7%

19.72%

GENERAL TAX GUIDANCE

**Tax inelastic products unless you're
trying to change consumption**

Soda?

Cigarettes?

Alcohol?

Property?

**Those who can afford to avoid
taxes will try to avoid them**

HOW TO AVOID UNINTENDED CONSEQUENCES

**Policy change shouldn't change
preferences in bad ways**

Israeli daycare

NCLB testing

ACA part-time hours

Policies must be a Nash equilibrium

ECONOMIC MODELS

Y T H O ?

**Why the h*ck am I making you
think about game theory?**

The world is never this simple!

The predictions are obvious!

Models purposefully shrink the world so we can measure and predict things in it

No economic model can be a perfect description of reality. **But the very process of constructing, testing and revising models, forces economists and policymakers to tighten their views about how an economy works.** This in turn promotes scientific debate over what drives economic behavior and what should (or should not) be done to deal with market failures.

Sam Ouliaris, IMF

No economic model can be a perfect description of reality. **But the very process of constructing, testing and revising models, forces economists and policymakers to tighten their views about how **anything** works.** This in turn promotes scientific debate over what drives economic behavior and what should (or should not) be done to deal with market failures.

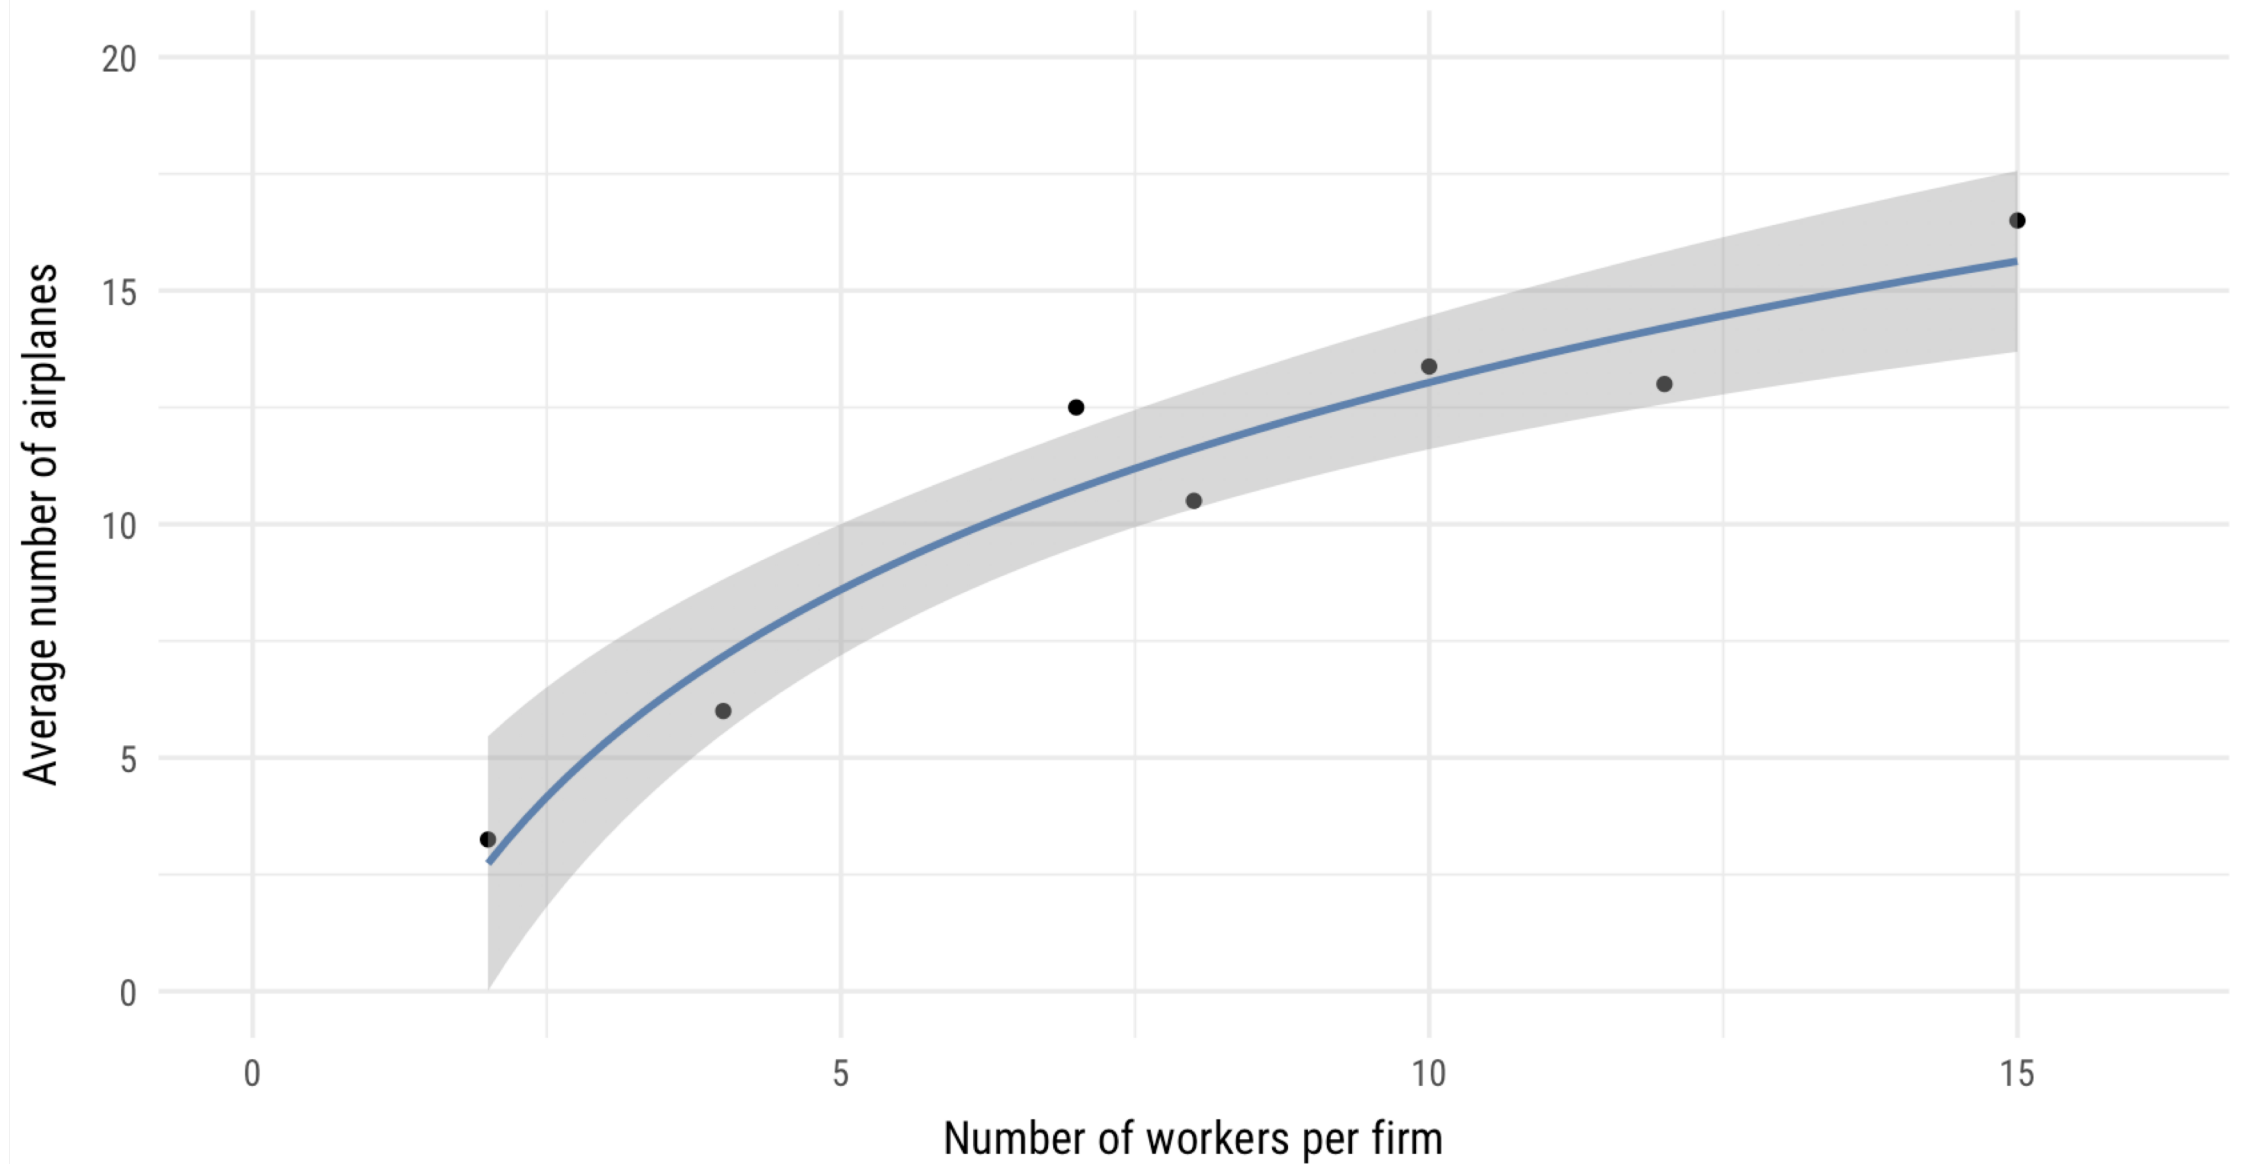

Sam Ouliaris, IMF

XYZ AIRLINES

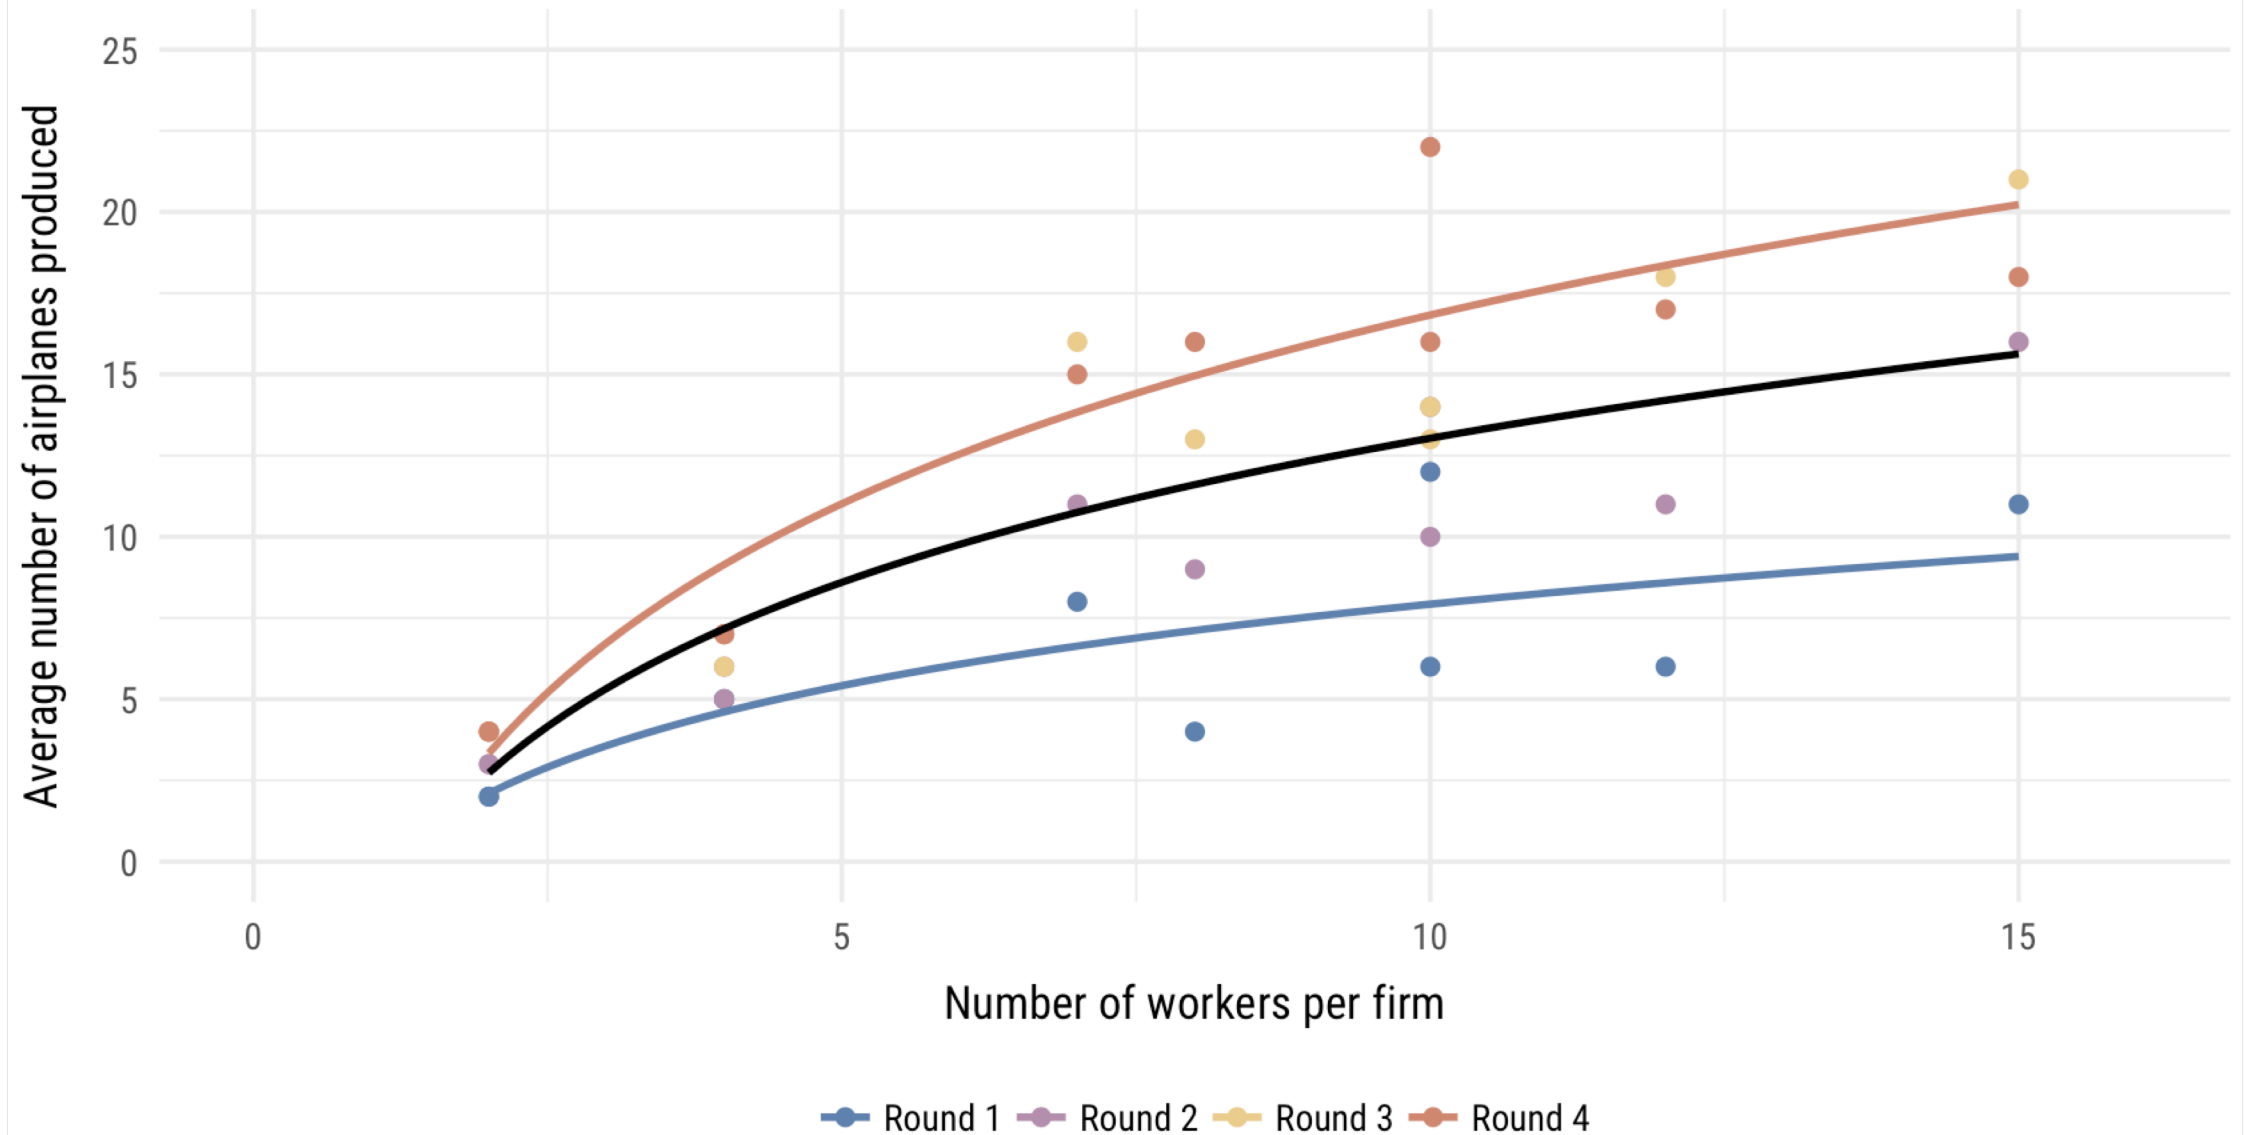

Average number of airplanes produced by 10 firms

Averaged over 4 rounds; firms varied in size

Number of airplanes produced by 10 firms

Firms varied in size

| | | | | | | | | | | | | | | | | |
|---------|---|-----|---|---|---|---|-----|----|----|------|----|------|-------|------|-------|----|
| Workers | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
| Planes | 0 | 1.5 | 3 | 5 | 6 | 7 | 8.5 | 10 | 11 | 11.5 | 12 | 12.5 | 13.25 | 13.5 | 13.75 | 14 |

**Does marginal product
always diminish?**

| | A | E | C | F |
|------------------|----|----|----|----|
| Free time | 13 | 14 | 19 | 20 |
| Grade | 84 | 81 | 57 | 50 |
| Opportunity cost | | 3 | | 7 |

WHY ARE YOU GOING HERE?
GAS IS TEN CENTS A GALLON CHEAPER AT
THE STATION FIVE MINUTES THAT WAY.

BECAUSE A PENNY SAVED
IS A PENNY EARNED.

IF YOU SPEND NINE MINUTES OF YOUR
TIME TO SAVE A DOLLAR, YOU'RE WORKING
FOR LESS THAN MINIMUM WAGE.

OPPORTUNITY COST

Cost for

PREFERENCES & TRADEOFFS

UTILITY

Happiness points

Diminishing marginal utility

UTILITY BUNDLES

**Theoretical combination of goods
that provide same level of utility**

$$u(x_1, x_2)$$

$$u(x_1, x_2) = x_1 x_2$$

UTILITY BUNDLES

$$u(x_1, x_2) = x_1 x_2$$

$$u(1, 2) \quad \mathbf{2}$$

$$u(100, 3) \quad \mathbf{300}$$

$$u(4, 1) \quad \mathbf{4}$$

What combinations of inputs will produce 12 utils?

$$u(x_1, x_2) = x_1 x_2$$

INDIFFERENCE CURVES

**Slope of indifference curve =
marginal rate of substitution (MRS)**

MRS at A = 9

MRS at H = 4

Marginal rate of substitution (MRS)

Theoretical tradeoff between inputs

Slope of indifference curve

Marginal rate of transformation (MRT)

Actual tradeoff between inputs
constrained by feasible frontier

Slope of feasible frontier

**What's the best number of
workers to use / planes to make?**

**What's the best combination of
hours studied / free time?**
